## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 5, 6,9,10,11,12,14,15,and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Cho (US 6,005,425).

The reference by Cho discloses a PLL with the ability to measure/calibrate the pulse width of the error signal from the phase detector, see figures 1 and 3A, where the phase detector(18) with phase input signal(ref clk) and phase feedback signal(fbk clk).Pulse width measure block(150 ) is shown and in figure 3A the memory register (64) allows the measurement to be stored for use when for example, as is inherent for PLL's, the input is lost or there is a change of frequency band/calibration. That is, these PLL synthesizers will have to generate new error signals at periodic intervals so as to maintain lock on the reference frequency. Once the PLL is locked then the fine tuning adjustment is stopped and no new signal from memory is required based on PW measurements.

See col. 10, conclusion for software code anticipation. The method steps being inherent.

***Allowable Subject Matter***

Claims 7,8, and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
